## SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

Manufacturing inventories and shipments showed little change in November.

Cheques cashed in clearing centres picked up in November after a fall off the previous month.

Consumer credit continued to expand in October.

<sup>1</sup>Gross National Product at market prices excluding accrued net income of farm operators from farm production. <sup>2</sup>Before dividends paid to non-residents; see also footnotes on Table 113. <sup>3</sup>Total of all monthly and quarterly series as in column 14, Table 90.

## PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale and the thirty industrial materials price indexes rose 0.7 per cent in December.

The index of industrial common stocks declined in December, reversing a 4-month advance.

The consumer price index rose in December resulting mainly from a 1 per cent gain in the food component.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

<sup>1</sup>Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. <sup>2</sup>Includes residual error of estimate. Source at bottom of Table 12.

Table 8: gross national expenditure (million dollars)

| years and quarters                  | personal expenditure on consumer goods and services | government expenditure on goods and services | business gross fixed capital formation |                             | value of physical change in inventories | exports of goods and services | deduct: imports of goods and services | residual error of estimate | gross national expenditure at market prices |

<sup>1</sup>Quarterly indexes for agriculture and for aggregate domestic product for the current year become available only once a year, with the fourth quarter data.<sup>2</sup>Includes public administration and defence; hospitals; education; welfare, religion and other community service, n.e.c.; and domestic service. Sources: Index of Industrial Production, (61-005). For detailed description of concepts and methods see Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505) D. B. S.

Table 16: industrial production, volume indexes (1949 = 100)<sup>1</sup>, based on the unrevised standard industrial classification

<sup>1</sup>Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. <sup>2</sup>The labour force as a percentage of the population 14 years of age and over. <sup>3</sup>The unemployed as a percentage of the labour force. <sup>1</sup>See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. <sup>2</sup>Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

<sup>1</sup>In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. <sup>2</sup>The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. <sup>3</sup>Includes miscellaneous manufacturing industries. <sup>4</sup>Includes also publishing and allied industries. <sup>5</sup>Includes also the storage and communication industries.

<sup>1</sup>The data in Tables 28 to 35 are based on reports from employers usually employing 15 persons and over and covering the respondents last pay period(s) in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. <sup>2</sup>Excludes agriculture, fishing, trapping and domestic service. <sup>3</sup>Includes storage and communication. <sup>4</sup>Includes insurance and real estate. <sup>5</sup>Excludes public administration and defence and such community services as health and education.

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Sources: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories<sup>1</sup> by industries as in the revised standard industrial classification (million dollars)

<sup>1</sup>Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. <sup>2</sup>Total manufacturing inventory owned by manufacturers including warehouse stocks. <sup>3</sup>Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. <sup>4</sup>End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

<sup>1</sup>Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

<sup>2</sup>100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. <sup>3</sup>Customs exports. <sup>4</sup>Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

<sup>1</sup>Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. <sup>2</sup>Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. <sup>3</sup>Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. <sup>4</sup>Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

<sup>1</sup>These totals include all generating agencies producing over ten million kilowatt hours per year. <sup>2</sup>These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. <sup>3</sup>Less imports. <sup>4</sup>Total net generation less net exports. <sup>5</sup>Mainly the amount used in electric boilers. Source: Electric Power Statistics, (57-001), D. B. S.

Note: Components may not add to totals due to rounding. <sup>1</sup>Includes crude oil, condensate and pentanes plus. <sup>2</sup>Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. <sup>3</sup>Gross new production by field and processing plants less field flared and waste, Canadian Sources only. <sup>4</sup>By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Sales of Manufactured and Natural Gas (45-005), D. B. S.

Note: Components may not add to totals due to rounding differences. <sup>1</sup>The data are collected for 1,400 municipalities and individual figures are available on request. Some of the annual totals for 1963 and 1964 differ slightly from the sum of the twelve monthly totals, due to the addition of statistics received too late to be included in the monthly data. Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Source: Building Permits (64-001), D. B. S.

<sup>1</sup>The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D. B. S.

<sup>1</sup>A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. <sup>2</sup>End of period. Source: New Residential Construction (64-002), D. B. S.

<sup>1</sup>Footnote and Source are at Bottom of Table 71. <sup>2</sup>Starting in January 1962, the data are not entirely comparable with earlier years because more centres are included and because of the expansion of the boundaries of metropolitan areas. This is based on information from the 1961 census.

<sup>1</sup>Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. <sup>2</sup>Planks and boards, flooring and square timber. <sup>3</sup>Hollow blocks including fireproofing and load-bearing tile. <sup>4</sup>For building insulation only.

<sup>5</sup>Figures cover the production of firms which normally account for 90 per cent of the total for Canada. <sup>6</sup>Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. <sup>1</sup>The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. <sup>2</sup>Excluding trucks. <sup>3</sup>The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

<sup>1</sup>These indexes are available for January, April and August only. <sup>2</sup>Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. <sup>3</sup>Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1964 are final prices. From August 1, 1964 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. <sup>4</sup>Barley No. 1 feed; hogs grade "B" alive. <sup>5</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. <sup>6</sup>Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. <sup>7</sup>Quotations refer to steers of all weights. <sup>8</sup>Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.

<sup>1</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

<sup>2</sup>Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.

<sup>3</sup>Annual data are monthly averages of crop year. <sup>4</sup>Includes eggs for hatching.

<sup>1</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

<sup>2</sup>Includes stocks held by manufacturers, wholesalers and other warehouses.

<sup>3</sup>Many mills were operating at more than the standard 26 working days in the month.

<sup>1</sup>Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. <sup>2</sup>Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

\*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. <sup>1</sup>Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. <sup>2</sup>Companies licensed under the Small Loans Act and affiliated companies engaged in making personal loans. <sup>3</sup>Cash loans with no conditional sales contract but usually repaid in instalments. <sup>4</sup>Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. <sup>5</sup>Loans other than secured loans and mortgage loans.

<sup>6</sup>Figures for dates other than year-end are estimated on the basis of loans made by twelve companies. <sup>7</sup>Sum of instalment credit of clothing hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. <sup>8</sup>Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. <sup>9</sup>Amount owing to oil companies ex commercial accounts. <sup>10</sup>Excludes mortgage loans data available yearly only. <sup>11</sup>The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form.

<sup>1</sup>Monthly averages for 1963 and 1964 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. <sup>3</sup>Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.

<sup>1</sup>Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. <sup>2</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. Revised figures to December 1963 only. <sup>3</sup>Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.

<sup>1</sup>Monthly averages for years 1963 and 1964 differ from the averages of the monthly data due to revisions which cannot be allocated by months. <sup>2</sup>Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. <sup>3</sup>United States and other foreign carriers. Excludes in transit passengers. <sup>4</sup>Cargo includes air freight and express but excludes mail and excess baggage. <sup>5</sup>Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

<sup>1</sup>The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. <sup>2</sup>In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. <sup>1</sup>Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. <sup>2</sup>The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. <sup>3</sup>Total new settled-for ordinary sales in Canada.

<sup>4</sup>Under new or amended contracts. Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, Connecticut, U. S. A.

<sup>1</sup>The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). <sup>2</sup>As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. <sup>3</sup>Includes also the furniture and furnishings industry. <sup>4</sup>Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. <sup>5</sup>Includes tobacco products, leather and miscellaneous manufacturing industries. <sup>6</sup>Includes also storage and communication industries. <sup>7</sup>Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

### A NOTE TO USERS

#### *Modifications in this issue:*

Commencing with this issue, Table 63 "Statistics of Refined Petroleum Products" has been redesigned. Under the three main headings,—production, sales and inventories—the table now provides information for eight major classifications of fuels and products. The groups newly introduced are: diesel fuel oil, aviation fuel, liquefied petroleum gases and the "all other" category.

The total refinery receipts shown include domestic and imported crude oil, condensate and pentanes plus, received by Canadian refineries.

The production values represent refinery production plus other materials used such as additives, etc.; adjustments are no longer made to delete losses.

The former series "apparent domestic sales" are now replaced by "net sales in Canada" and they include the deliveries of butane commingled in the crude stream in Saskatchewan and Alberta.

Closing inventories are those held at the end of period at gas plants and in storage caverns.

All volumes of crude oil are given in thousand barrels of 35 Canadian gallons at 60°F.

Comparable historical data on a monthly basis for all above series are available in the D.B.S. publication "Refined Petroleum Products" Catalogue No. 45-004.

#### *Revisions to data:*

Starting with November 1964, there is a change in classifications in the data appearing in Table 107 "Currency outside Banks and Chartered Bank Deposits". The revised data are now given on an "average of Wednesdays" basis and therefore are not strictly comparable with the previous month-end values shown.

The seasonally adjusted data on labour force for Canada and by region on page S-1 and tables 20 to 25 inclusive have been revised starting with January, 1962. The entire revisions for these series were published in the February 16, issue of the Weekly Supplement to the Review (Catalogue No. 11-004).

## EARNINGS AND EDUCATION

The programme for analysis of the data collected in the 1961 Census of Canada calls for a series of monographs, one of which is to be entitled *Incomes of Canadians*. Meanwhile, two chapters of the forthcoming monograph have been published in an advance release *Earnings and Education*;<sup>1</sup> one chapter discusses Earnings by Labour Force Characteristics and the other Private Returns to Education. The purpose of this article is to present in summary form the data and the tentative conclusions that maybe drawn from them.

### Earnings by Labour Force Characteristics

The analysis of income distribution is concerned with the origins of income, the determinants of its size and with its disposition between consumption and investment. This chapter is restricted to an examination of individual income earned in economic activity, which is the major source of income. Thus 90 per cent of total income of males came from employment and for 87 per cent of males employment was the major source of income; the corresponding figures for females are 77 per cent and 66 per cent.

Determinants of earnings are discussed under the following headings: sex; sex and age; sex, age and education; sex, earnings and occupation; the occupational characteristics of the male labour

force; ranking of specific occupations, and age-earnings profiles by occupation and level of schooling.

The disparity in earnings from employment by sex is large: median earnings for males in 1961 were approximately \$3,800 and for women \$2,000. Part of this differential is accounted for by the fact that more women move in and out of the labour force during the course of the year and participate more in part-time work. While data on the duration of employment by sex are not adequate to isolate this factor as an element in the differential in earnings, information on earnings of full-year workers shows some narrowing of the earnings differential.

The age of a worker gives some indication of experience and is therefore a determinant of income, particularly in those occupations where on-the-job experience is important. This generalization applies to workers who enter the labour force when their schooling is complete and remain in it until retirement. It does not apply to the married woman who returns to the labour force after some years at home caring for her family.

The earnings curve for male wage and salary workers rises with each age-group to reach its peak at the ages 35 to 44, remaining very close to that level in the next highest age group. In terms of median earnings, the peak for female workers was reached ten years earlier and there was something of a plateau in earnings in the age span from 25 to 54.

<sup>1</sup> Catalogue No. 91-510, Queen's Printer, Ottawa, \$1.00.

**TABLE 1. Ratio of Average Wages and Salaries by Age Groups to Average Wages and Salaries of Age Group 35 to 44**

| Age         | Males | Females |
|-------------|-------|---------|
| 15-19 ..... | .42   | .65     |
| 20-24 ..... | .65   | .86     |
| 25-34 ..... | .89   | 1.00    |
| 35-44 ..... | 1.00  | 1.00    |
| 45-54 ..... | .99   | 1.01    |
| 55-64 ..... | .92   | .97     |

The differential between earnings of male and female workers is relatively narrow in the younger age groups; the male average is only 14 per cent higher than the female average. This suggests that girls on leaving school are better prepared for immediate employment than boys, who may require further training whether as apprentices or otherwise.

However, when women's earnings are classified by education as well as by age, more differences by age become apparent. University graduates in the labour force had the greatest variability by age, followed by earnings of women with a secondary school education, with the least variability in the earnings of women with only an elementary school education.

The female labour force is better educated than the male; 30 per cent of the women had only elementary school education as against 44 per cent of the males; somewhat more than one third of the women had four years or more of secondary education compared with one quarter of the men. On the other hand, the male labour force has a higher proportion of university graduates than the female labour force. The Census obtained information on elementary schooling, secondary schooling and university training but not on attendance in such institutions as trade schools and teachers' training colleges. It may be that the educational differential between the sexes is not so wide as these statistics suggest.

Considering wage and salary workers only, education does narrow the gap between earnings of male and female workers by age group. The higher the level of education, the smaller the difference between earnings of male and female workers in the same age group. But it may be noted that average earnings of women employees with university degrees are lower than average earnings of males with 4-5 years of secondary school and in turn women with secondary education earned less than men with only elementary schooling.

When the comparison is extended to the total labour force, i.e. self-employed and employers as well as employees, the differentials by age are as great for higher levels of education as for the least well educated, but somewhat narrower at the intermediate level than for employees only. This difference may be accounted for by the status of the two sexes; average earnings of males who are employers or self-employed are higher than those of male employees whereas average earnings of women are much the same regardless of status.

Turning to consider occupation as well as age and sex, it is apparent that the occupational structure of the two sexes is an important determinant of earnings. Some occupations are closed to women, such as logging or mining because they are considered to be too physically demanding, while custom and tradition tend to channel women into clerical and service occupations.

Data on the occupational structure of the male labour force, by broad occupational groups, show that approximately one third of the males with only elementary schooling were craftsmen or production workers (in manufacturing, construction, etc.); nearly one fifth of this group were farmers or farm workers. The remainder were scattered over other occupational groups.

**TABLE 2. Distribution of the Total Current Labour Force by Levels of Schooling, June 1, 1961**

**TABLE 3. Average Income from Employment by Age and Level of Schooling for Year Ending May 31, 1961: Male Non-farm Labour Force**

| Age         | Elementary only | Secondary 1-3 years | Secondary 4-5 years | Some university | University degree |
|-------------|-----------------|---------------------|---------------------|-----------------|-------------------|
|             | dollars         |                     |                     |                 |                   |
| 15-24 ..... | 1,928           | 2,206               | 2,497               | 1,868           | 3,408             |
| 25-34 ..... | 3,311           | 4,147               | 4,760               | 5,108           | 6,909             |
| 35-44 ..... | 3,653           | 4,629               | 5,779               | 6,608           | 9,966             |
| 45-54 ..... | 3,648           | 4,756               | 6,130               | 6,882           | 10,821            |
| 55-64 ..... | 3,480           | 4,588               | 5,944               | 6,731           | 10,609            |

However, with more education, the pattern of male occupations is markedly changed. Some 30 per cent of those with secondary education were in managerial and professional occupations, about one quarter in clerical or sales occupations and only slightly over one fifth were craftsmen or production workers. Of those with university education nearly 70 per cent were in professional and technical occupations and 17 per cent in managerial occupations.

Women, however, regardless of education, were much more concentrated in certain occupations. Of the women with elementary schooling, nearly 40 per cent were in service and recreation occupations and nearly 24 per cent were craftsmen or production workers; of those with secondary education about 45 per cent were in clerical occupations and 28 per cent in professional and technical occupations; of the women with university degrees 78 per cent were in professional and technical occupations and about 12 per cent in clerical occupations.

Certain features of service occupations should be noted. They fall into two quite distinct categories: protective (policemen, firemen, etc.) where the labour force is almost entirely male and earnings comparable with those of skilled craftsmen; other (waitresses, hairdressers, barbers, etc.) where there are substantially more women than men, whose wages are low and where, so far as women are concerned, there is a high degree of part-time employment.

In the craft and production occupations women tend to be concentrated in the traditionally feminine trades, predominantly textiles and clothing. Because of the concentration of women with secondary school education in clerical occupations, they outnumber men; of those in professional occupations nearly 95 per cent were in teaching or nursing.

Most of the women university graduates in professional or technical occupations are teachers, nurses, welfare workers or librarians; there are few women in the high earnings professions, engineering, medicine and law. For men with secondary education or better 35 per cent are in managerial occupations while less than 7 per cent of women with similar schooling are in this category.

When earnings for men and women are standardized to eliminate the occupational structure as a factor, the differentials, while narrowed considerably, remain wide. In conclusion, it appears that the amount of time worked and occupation, rather than age or schooling, are the factors which, on the basis of Census data, account for part of the differential between male and female earnings. However, Department of Labour data indicate that women are invariably paid lower rates than men in the same occupations in the same labour market.

The status of the worker also helps to account for earnings differentials among workers. Of the non-farm male labour force somewhat more than

11 per cent were self-employed. In most occupations earnings of the self-employed are higher than those of the employees, the important exception being the managerial classes. However, there is much more dispersion around the average self-employed earnings, which are about 50 per cent higher than the average for employees, while median earnings were only 9 per cent higher.

Self-employment embraces a very wide range of occupations, from the highly trained professional man to the itinerant worker who takes on odd jobs. It may involve considerable investment in premises and equipment and if so an appreciable amount of earnings will constitute a return to capital and a reward for risk-taking.

Several main conclusions emerge from this study. The average income from employment of the female labour force is less than half that of males. The most important factors explaining this differential, on the basis of data which do not take into account disparities in rates of pay, are the differences in the duration of employment and the differences in the occupational structure of the two sexes. Earnings of men, unlike those of women, are fairly closely correlated with age. Where skill and experience are important, earnings rise with age and in this regard women may be at a disadvantage because of discontinuous employment. While there are some variations by age and by level of schooling for women, it is less pronounced than for men.

When occupations of males are ranked by earnings, the lowest tenth are characterized by little schooling and by considerable inequality, probably the result of the insecurity of employment for unskilled labour. Most of the occupations in the upper part of the earnings scale are managerial and professional, and are characterized by above average education, with the most marked differences by age at the higher levels of education.

### Private Returns to Education

Economists have long been aware that there was a relationship between education and earnings, inequality of incomes and the rate of economic growth. However, they were preoccupied with the concept of physical capital. It was not until after the Second World War that theoretical and empirical work was expanded to include human capital. Prompted in part by modern governments' commitment to policies to promote sustained economic growth, systematic studies of the role of education have been carried out since that time.

One writer has summarized the problems to be studied as follows:

1. What has been the total human-capital inputs into the productive system, and how have these affected national outputs, that is, gross national product, over a period of time?

2. How large a part of society's productive resources have been put into formation of human capital over the past, and how has this compared with what has gone into investment in physical capital?
3. What rates of return have been realized from investments in human capital (in college education, high school education and so forth)? . . . . .
4. Looking ahead, how may past, present, and prospective aggregate investments in formation of human capital be expected to affect the stream of national product in the future?<sup>2</sup>

One study for the United States quantified the answer to the first question by estimating that nearly one quarter of the growth in national product between 1927 and 1957 was attributable to the improvement in the education of the labour force.

<sup>2</sup> See Mary Jean Bowman, "Human Capital: Concepts and Measures", *Economics of Higher Education*, ed. Selma J. Mushkin, U.S. Department of Health, Education, and Welfare, U.S. Government Printing Office, Washington, 196, pages 69-70. This article discusses the different possible approaches to the measurement of the impact of education. Another discussion of approaches to the treatment of education in economic research may be found in the report by Theodore W. Schultz, *The Economic Value of Education*, Columbia University Press, New York and London, 1963.

In attempting to answer the second question — what is the gross value of the existing stock of human resources? — studies have been made of the direct costs of a specified period of schooling, such as teachers' salaries, and the indirect costs, such as the earnings the students forego. These estimates were multiplied by the level of education embodied in the labour force. These studies indicated that the value of the educational stock of the labour force had increased considerably more than value of the stock of reproducible physical capital.

Thus far no parallel studies for Canada have been published. Although the educational attainments of the Canadian labour force are considerably below those of the American labour force, education has been given increasing emphasis in Canada in recent years and it is probable that the study<sup>3</sup> soon to be published will show results not dissimilar from those of the United States.

The following table indicates the increased emphasis on education in recent years.

<sup>3</sup> *The Contribution of Education to Economic Growth*, Gordon W. Bertram, Economic Council of Canada, Queen's Printer, Ottawa.

**Source:** Table 19, Census Report 94-513 *Occupations by Sex Showing (a) Marital Status and (b) Schooling, by Age*, 1961 Census of Canada.

It was not until the 1961 Census that an attempt was made to analyse the interrelationships among occupation, schooling, age and earnings of paid workers. The 1961 Census data have limitations in that the estimates exclude the labour force residents on farms and, as mentioned earlier, they include only schooling in the three traditional institutions, the elementary school, the secondary school and the university. This chapter of the Census monograph summarized here attempts to answer the third of the questions set out above, namely, what rates of return are realized from investments in human capital.

Some economists argue that expenditure on education represents a form of consumption. They

point to the fact that the education of women insofar as they are not in the labour force makes no direct contribution to national production. Furthermore they also argue that there is an element of consumption in all outlays on education in that it enlarges the capacity to enjoy nature, art and literature. These arguments might suggest some sort of ranking of expenditure on education. Since elementary schooling is almost indispensable to the conduct of daily life in the modern society, and what is more, compulsory in many societies, it might be considered as entirely a consumption expenditure; secondary education might be considered a mixture of consumption and investment while university education might be considered an investment.

RATIO OF AVERAGE INCOME FROM EMPLOYMENT BY AGE GROUPS TO AVERAGE  
INCOME FROM EMPLOYMENT FOR AGE GROUP 25-34 BY LEVEL OF SCHOOLING  
MALES IN CURRENT LABOUR FORCE, 1961

The returns to education may be considered from the point of view of the community or the individual. The community devotes resources to education and benefits from the increased productivity of the labour force. The individual (or his family) incur costs, direct in respect of fees etc. and indirect in respect of earnings foregone, and benefits from the higher earnings his education is likely to bring him.

Since the private costs of elementary education are negligible, this study is concerned with estimating the private costs, direct and indirect, of secondary schooling and university. Studies for the United States and some other countries show that

the indirect costs i.e. earnings foregone at higher levels of education exceed other private costs and also exceed other public costs.

Estimates were prepared of the private costs of schooling and the returns to schooling for males only at the secondary and university levels. It was assumed that the secondary schools students attended between the years 15 to 18 inclusive, that university students attended for four years and that the average male university student attended between the ages of 19 to 22 inclusive.

The estimates for secondary schooling by age are shown in the table below:

**TABLE 5. Private Annual Costs of Secondary Schooling – Males, 1961**

| Age     | Books   | Earnings foregone | Total |
|---------|---------|-------------------|-------|
|         | dollars |                   |       |
| 15..... | 25      | 700               | 725   |
| 16..... | 25      | 899               | 924   |
| 17..... | 25      | 1,098             | 1,123 |
| 18..... | 25      | 1,321             | 1,346 |

The estimates for university training, which take account of monies received from bursaries and

scholarships, and costs incurred for tuition and transportation (other than local) are shown below:

**TABLE 6. Private Annual Costs of University – Males, 1961**

| Age     | Earnings foregone <sup>1</sup> | Less scholarships | Tuition | Books | Transportation | Total |
|---------|--------------------------------|-------------------|---------|-------|----------------|-------|
|         | dollars                        |                   |         |       |                |       |
| 19..... | 1,042                          | -125              | 409     | 97    | 70             | 1,493 |
| 20..... | 1,075                          | -125              | 409     | 97    | 70             | 1,526 |
| 21..... | 1,571                          | -125              | 409     | 97    | 70             | 2,022 |
| 22..... | 1,915                          | -125              | 409     | 97    | 70             | 2,366 |

<sup>1</sup> These statistics are derived from average annual earnings reported by members of the current labour force rather than rates of pay of the current labour force and thus they are realized earnings of the labour force. This implicitly allows for loss of earnings because of unemployment, illness or other factors which result in a loss of earnings during the year.

It is evident from these tables that the private costs of education are fairly high and that they rise with age.

While there is general agreement as to the appropriate measure of private costs of education, there is some divergence of opinion as to the measurement of private returns to education. Broadly speaking, there are two categories of approach to this problem: (a) studies which measure "lifetime" incomes by level of education and (b) studies which calculate rates of return to investment in education.

Using the first approach, the report presents data on the lifetime earnings of the male non-farm labour force by selected occupational categories,

adjusted for mortality but not for participation rates, in considerable detail. It also shows in a brief table the lifetime earnings of males for selected ages and selected levels of schooling. Apart from the fact that this method of estimating returns to education ignores the cost, it also leaves out of account the different age-earnings profiles at different levels of schooling and this exaggerates the differences in return.

Another brief table shows the discounted lifetime earnings for selected levels of schooling for males aged 19-64 and aged 15-64 at different levels of interest. The higher the discount rate the smaller the differences in earnings. This

method, which calculates present values from the commencement of schooling, assuming zero earnings during schooling, implicitly takes account

of earnings foregone by reason of education, if discounted to age 15, and of earnings foregone by reason of university if discounted to age 19.

**TABLE 7. Discounted Lifetime Earnings**

| Schooling               | Discount rate |         |         |        |
|-------------------------|---------------|---------|---------|--------|
|                         | 0             | 3%      | 5%      | 8%     |
| dollars                 |               |         |         |        |
| <b>Males aged 19-64</b> |               |         |         |        |
| Elementary 5-8 .....    | 148,449       | 74,275  | 54,524  | 35,330 |
| Secondary 4-5 .....     | 222,676       | 108,626 | 78,114  | 49,321 |
| University degree ..... | 357,675       | 164,115 | 112,100 | 65,187 |
| <b>Males aged 15-64</b> |               |         |         |        |
| Elementary 5-8 .....    | 152,473       | 72,720  | 48,424  | 29,301 |
| Secondary 4-5 .....     | 221,700       | 100,671 | 64,264  | 36,252 |
| University degree ..... | 356,108       | 151,852 | 92,225  | 47,914 |

To illustrate how different methods of estimation yield widely different results, it may be noted that the undiscounted lifetime earnings of university graduates are 141 per cent higher than those of workers with only elementary schooling when 19 years is used as the starting age and 134 per cent higher if the age is lowered to 15. Present values at ages 19 and 15 respectively are only 85 and 63 per cent higher, when a discount rate of 8 per cent is applied.

Turning to consider the second approach, whereby income benefits from education are compared with the costs involved, one method that may be used is to treat the costs as negative income during attendance at school. Estimates are presented of the earnings differentials for cohorts of males who have completed high school and for cohorts of males who have completed university.

**TABLE 8. Additional Income from Employment Received by Males for Year Ended May 31, 1961 as a Result of Completing Selected Levels of Schooling<sup>1</sup>**

| Age                  | Secondary<br>4-5 years | University<br>degree |
|----------------------|------------------------|----------------------|
| dollars              |                        |                      |
| 15 .....             | - 725                  |                      |

| Rate of return ..... | 16.3                   | 19.7                 |

<sup>1</sup> For the ages 25 to 64 the earnings figures are the additional earnings per year at each age resulting from additional schooling. For high school graduates these are the additional earnings received by graduates as compared with persons having only 5 to 8 years of elementary schooling. For university graduates it is the increment in earnings over the earnings of persons with 4 to 5 years of high school.

Another method is to treat the costs as investment, rather than negative income, and a table is presented on this basis.

Both tables suggest that the returns to investment in education are substantial and the first of the two tables suggests that investment in university education yields a higher return than investment in secondary education.

The report concluded by drawing some comparisons between Canada and the United States in the matter of earnings and income. The typical member of the Canadian labour force has had less schooling than his American counterpart. Returns to university training in Canada are higher than returns to secondary education; the reverse appears to be true in the United States. There are significant

differences in the wage-earnings profiles of the various education groups between the two countries. For example, in the age group 25 to 34 there are much greater relative differences between the average earnings of university graduates and the average earnings of those with secondary or elementary education in Canada than in the United States. The age-earning curve is also different in the two countries. In the United States, there is a wider range between the average earnings of the younger and older age groups. The only education group showing similar age earnings is the high school graduates. There are no readily available published estimates of private costs of education in the United States from the last Census such as this report shows for Canada for 1961 so it is impossible at present to judge how the returns to education may differ in the two countries.

**TABLE 9. Costs and Returns to Elementary School Graduates from Completion of Elementary School to Completion of University**

| Age                  | Costs or investment | Additional income <sup>1</sup> |
|----------------------|---------------------|--------------------------------|
|                      | dollars             |                                |
| 15 .....             | 725                 |                                |
| 16 .....             | 924                 |                                |
| 17 .....             | 1,122               |                                |
| 18 .....             | 1,346               |                                |
| 19 .....             | 1,493               |                                |
| 20 .....             | 1,526               |                                |
| 21 .....             | 2,022               |                                |
| 22 .....             | 2,366               |                                |
| 23 .....             |                     | 1,113                          |
| 24 .....             |                     | 1,531                          |
| 25-34 .....          |                     | 3,418                          |
| 35-44 .....          |                     | 5,910                          |
| 45-54 .....          |                     | 6,396                          |
| 55-64 .....          |                     | 5,597                          |
| Rate of return ..... | 17.1%               |                                |

<sup>1</sup> For the age groups 25 to 64 the earnings figures represent the additional earnings per year at each age resulting from additional schooling.

## LABOUR FORCE (More detail in Table 19)

Total labour force, employment and unemployment were higher in January; the unemployment rate was 3.5 per cent.

|  | total labour force | total employed | employed non-agriculture | unemployed | unemployment rate | not in the labour force |
|--|--------------------|----------------|--------------------------|------------|-------------------|-------------------------|

## INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production rose by 1.1 per cent in December as manufacturing was the major contributor to the gain; mining increased fractionally while electric power and gas utilities fell by 2.5 per cent.

|        | total<br>industrial<br>production (1949=100) | manufacturing (1949=100) |          |              | (1949=100) |                   |              |

## CONSTRUCTION (More detail in Tables 67, 72 and 73)

The value of building permits increased sharply in December particularly in the non-residential sector. New dwelling construction was generally higher in January.

| value of building permits |   |                 |                 | new dwelling construction, centres 5,000 and over |                    |                              |

## EXPORTS AND IMPORTS (More details in Tables 91 and 92)

Total exports advanced 3.2 per cent in December as increases in exports to United States and the United Kingdom were partially balanced by a decrease to "all other countries".

Total imports rose 2.8 per cent in November attributable chiefly to an increase in imports from the United States; imports from the United Kingdom declined.

exports including re-exports (million dollars)

imports (million dollars)

<sup>1</sup>Gross National Product at market prices excluding accrued net income of farm operators from farm production. <sup>2</sup>Before dividends paid to non-residents; see also footnotes on Table 113. <sup>3</sup>Total of all monthly and quarterly series as in column 14, Table 90.

## PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale price index moved up fractionally in January.

The index of thirty industrial materials rose 1.6% in January.

The index of industrial common stocks advanced strongly in January to more than offset the December decline.

The consumer price index registered its fourth consecutive month of increase in January as the gain in the food group outweighed a decline for durable goods.

<sup>1</sup>The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. <sup>2</sup>Includes logging, fishing, trapping and hunting. <sup>3</sup>Includes mechanical and construction. <sup>4</sup>Includes a small number in non-specified occupations. <sup>5</sup>Does not include students entering Canada on students' visas. <sup>6</sup>Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

<sup>1</sup>Figures for births, marriages and deaths for 1965 and 1966 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. These figures are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D. B. S.

Table 7: national income and gross national product (million dollars)

| years and quarters                  | salaries, wages and supplementary labour income | military pay and allowances | corporation profits before taxes and before dividends paid to non-residents | deduct: dividends paid to non-residents | rent, interest and miscellaneous investment income | accrued net income of farm operators from farm production <sup>1</sup> | net income of non-farm unincorporated business | inventory valuation adjustment | net national income at factor cost | indirect taxes less subsidies | capital consumption allowances and miscellaneous valuation adjustments | gross national product at market prices <sup>2</sup> |

<sup>1</sup>Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. <sup>2</sup>Includes residual error of estimate. Source at bottom of Table 12.
